## Migrating Blog Database From ClearDB To Azure DB For MySQL

How to migrate the ClearDB database in Azure Web App to Azure Database for MySQL. . I will be using MySQL Workbench as my data migration tool. I would like to store CSV and XML files in a database and specify the file as the value for a database property. I tried to create a new web application and create a datastore in the form of a CSV file and XML files, but that didn't work. Any suggestions why this isn't working? I'm not sure how to transfer the files so that the data is stored in the data store.

Thanks You cannot transfer files between two databases. You can only transfer data between one store and another.
