AutoCAD includes advanced geometry editing capabilities including a wide range of geometric tools and features, including polygon modeling, line drawing, primitive drafting (line, polygon, arc, spline, circle, ellipse, compound) drawing, profile editing, and full-fledged 3D modeling. AutoCAD is used for a wide range of professional engineering and architectural uses, including civil engineering, mechanical design, electrical engineering, industrial design, landscape architecture, and architectural design. The adoption of AutoCAD as the de facto standard is so widespread that many software companies and industry users refer to it as the AutoCAD platform. Companies offering AutoCAD-compatible products include, but are not limited to, companies producing printers, scanners, plotters, plotter controllers, drafting tables, large format printers, paint dispensers, and factory automation systems, among others. History AutoCAD is an acronym for "Automatic Computer-Aided Drafting". The acronym CAD (Computer-Aided Drafting) is used to describe software for producing drawings and drafting tools that mimic certain aspects of mechanical drafting. It was named a top product of the year in the CAD category by CAD User magazine in 1994 and 1995. AutoCAD has been continually improved over the years. Its official release date is December 5, 1982. Advanced Technology Concepts in AutoCAD In AutoCAD, a host computer communicates with drawing objects using drawing objects, which are a combination of a "host object" (also known as an "active" object) and a "drawing object" (also known as a "passive" object). The host object is a geometry object, such as a line, arc, circle, ellipse, rectangle, or spline, that is manipulated directly by the user to draw the object. The drawing object is an image object, such as a graphic symbol, text, or line, that can be used to make marks, such as lines, points, circles, and arcs. AutoCAD uses the host object to create and manipulate the drawing object. When the drawing object is created, it is combined with the host object. The drawing object is then positioned with respect to the host object, and may have both linear and angular properties (and/or dimensions) that are stored in the host object and the drawing object, respectively. The host object is passed in a series of commands to the drawing

object. The drawing object responds

Browsing Autodesk Services Products in the Autodesk Marketplace To learn more about any of the Autodesk products in the Autodesk Marketplace, go to: the value and use of information continues to increase, individuals and businesses seek additional ways to process and store information. One option is an information handling system. An information handling system generally processes, compiles, stores, and/or communicates information or data for business, personal, or other purposes. Because technology and information handling needs and requirements may vary between different applications, information handling systems may also vary regarding what information is handled, how the information is handled, how much information is processed, stored, or communicated, and how quickly and efficiently the information may be processed, stored, or communicated. The variations in information handling systems allow for information handling systems to be general or configured for a specific user or specific use such as financial transaction processing, reservations, enterprise data storage, or global communications. In addition, information handling systems may include a variety of hardware and software resources that may be configured to process, store, and communicate information and may include one or more computer systems, data storage systems, and networking systems.

CLEVELAND – There's been plenty of talk around the Cavs' offseason leading up to this morning's draft and more is sure to come about which players they will draft with the top overall pick or who will they take at the end of the second round. No one in Cleveland had heard of Kentucky guard Andrew Harrison, but he decided to test the selection waters and that decision could work out very well for him. Harrison is not likely to be drafted this year but might be a fit next summer or even next year. He's a 6-foot-6 guard who at the combine measured in at 21 years of age with a blazing fast 40-time and a max vertical leap of 39-inches. He played in the 2011 Las Vegas Summer
