vonets vap11g driver windows 8
download the appropriate
configuration files and install the
driver for your computer. The
present invention relates to a
dispensing member, and a
dispensing system. More
particularly, the present invention
relates to a hair dryer for a
dispensing system. Drying and
styling apparatus of various types
are known. For example, U.S. Pat.
No. 5,819,848 describes a hair
dryer and hairbrush attachment. A
motor that produces heated air is

coupled to an intermediate support, which is, in turn, coupled to a venturi housing. Hair is blown through the venturi housing and subjected to the heated air produced by the motor. U.S. Pat. No. 6,749,294 describes another hair dryer with a heat generating element. A removable cartridge includes a venturi with an interior chamber and a heating element. A user of the apparatus removes the heating element from the cartridge and inserts it into the venturi chamber. The heated air is then

drawn into the airflow port. U.S. Pat. No. 5,390,932 describes a handheld hair dryer for use with a hair brush, which is movably supported by a base. A motor coupled to a heat generating element produces heated air that flows past a venturi through which hair is pulled from the brush. U.S. Pat. No. 5,538,276 describes a hair dryer with a movable nozzle that moves between a first position in which it is positioned near the user's ear to permit the user to dry her hair while cleaning her ears and

a second position in which it is located proximate to her face for drying her face. U.S. Pat. No. 6,361,326 describes a portable hair dryer with a movable handle that can be rotated to the right or left to permit the user to position the head of the user's hair in a direction opposite to the direction of the airflow to permit the user to view the hair as it is dried. The present invention is directed toward a novel hair dryer, which is, in turn, utilized in a dispensing system. According to one aspect of the invention, the

hair dryer comprises a housing; a motor within the housing, the motor defining a motor axis; a suction chamber defined by the housing, the suction chamber including at least one opening; a first passage defining a first air path in communication with the suction chamber; and a second passage 82138339de
