FOR AGAINST CATS Activation Code Free PC/Windows

FOR AGAINST CATS is a CMD console-based utility that enables and disables the computer keyboard from keystrokes based on a cat's presence or absence. The application runs in 'console' mode with a GUI. I had so much fun writing it, even though it's not the greatest of all ideas (though I think it could still be improved). It's a really simple tool that (at the time of writing) doesn't have any competition. It's like a cat version of having a full-screen mode. If you're looking for a better solution, please continue to use the suggestions I give you! Also, I decided to allow you to preview the app on a PC without any installed programs. Simply right-click on the app's icon and select "Run As Administrator" and press "OK" to run the tool. THE PORTED VERSION: As promised, the app has been ported to run on Windows 10. There are no major changes, however, there are some graphical improvements such as a more realistic and fancy logo and the app window is now resizable. I have tested the app on Windows 7, 8, and 10, it works on all of them (with slight variations). THE DOWNLOAD LINK: Link removed. Sorry, but we're not going to host the app any longer and we would prefer it to be on a different website for reasons that we will not reveal here. HISTORY: I wrote this a long time ago (a year or so, actually), it was originally part of a much more complex application but I decided to make it stand on its own. At the time it was originally published, it was called "FOR KIDS" because my primary objective was making a keylogger for my kids that would disable your keyboard if they touched it. I actually have the source code of this app somewhere, but I can't find it. So, I had to re-write everything and release it as a stand-alone product, hence the name change and the renaming of the source files (to add a ".cat" suffix to them). The source code is still in my hard drive and I can access it, it's just hard to search for it. The first step to having the source code is to get the original FOR KIDS project, which I have, and then you will find the cat-related source code in the "C:\Projects\FOR
