Block creation Block (alternatively, BlockBuilder) is a block object. A block is similar to a group, but a block can contain multiple shapes, and can be referenced from other blocks. A block can be used to hide, and in some cases control, the parts of an object that you do not want to be visible. Blocks are used primarily for creating parts of an object, such as using blocks to cut out holes for screws or mounting parts to a substrate. Block objects can be locked, so that they can

only be edited by the person who created them. A block can also be used to create a template for a shape. For example, a line may be placed on the same location on each side of a part. This can be used to avoid having to draw the same line repeatedly, saving time. This template is also placed in the block and then filled. This can be used for creating shapes such as a part with the same profile but with a different finish on each side of it. Cabinet A cabinet (alternatively cabinet maker) is a container for items. A cabinet can be made using blocks, or it can be made using a profile. Block objects can contain a number of other blocks, and any blocks inside a block can be edited and re-arranged. Cabinets can be created at any scale, and in any style. They can be made with the right or wrong ends. The inner part of a cabinet can be hidden or shown, while the exterior can be left visible or hidden.

Clipping layers Clipping layers are used to

show or hide specific parts of a drawing. Clipping layers are very similar to mask layers. Clipping layers work in a similar fashion to layers and mask layers, as they can be moved, zoomed and rotated. The difference is that it is very easy to create a clipping layer and hide or show specific parts of a layer.

Color Picker The color picker allows for color sampling. This is a tool that will allow you to change color selections in a document, by clicking on a color within a color range, allowing you to change the color of a part of a drawing.

Data Management A data management is the capability to link data to a drawing. There are a number of different ways to do this, including by using a drawing table, an associative table, cross-references, layer properties, or expressions. A layer that is linked by a drawing ca3bfb1094

I'm having trouble showing this sequence is Cauchy. I know I need to show that for all $\epsilon > 0$, there exists an N so that

for all $m, n > N$, $|x_m - x_n|$
