Most if not all of the APIs are supported by versions of the software, but additional APIs are not always supported. Support for Visual LISP and VBA is only supported starting with AutoCAD Crack Keygen 2016. The relationship between the APIs is described here.

AutoLISP AutoLISP is a simple scripting language. It can be used to automate simple tasks, such as creating menus. AutoLISP is compiled using a standalone compiler. It can produce executables for Windows, Linux and Mac OS X. When used with the AutoCAD application, it is integrated with the software's functionality and should not be used as a separate language.

Visual LISP Visual LISP is a Visual Basic-based language that is also integrated with AutoCAD.

VBA VBA is Microsoft's scripting language that has been used in Excel since 1990. AutoCAD uses it to allow editing of parts of AutoCAD drawing files in Microsoft Office. The language can be used to edit a drawing and automate any operation involving that drawing, such as starting a new drawing, closing a file, or opening a drawing. It has a dedicated engine with its own scripting language.

.NET .NET is a Microsoft development environment that allows access to C# code from AutoCAD. It is a typed language with object-oriented features and can be compiled to produce native code.

ObjectARX ObjectARX is a C++ class library that can be used to create add-on applications for AutoCAD. Autodesk released AutoCAD Architect 2016 in January 2016, which introduced a new architecture based on C++ and C#. AutoCAD Architect allows using ObjectARX in AutoCAD drawings, and any drawing can be converted to Architect drawings. It can also be used in Autodesk Applications (e.g. AutoCAD Electrical, AutoCAD Civil 3D) and Autodesk Construction (e.g. AutoCAD Civil 3D, Navisworks). Since AutoCAD 2017, any type of drawing can be converted to Architect drawings. This allows converting files between different types of files. This feature is called Interoperability. In version 2016.2, Autodesk added an automation engine called the eCoordination Engine (eCE). A number of tools that enable CAD design workflow automation have been developed using the ObjectARX interface. Among these are ca3bfb1094
