If your problem can not be solved to use " click the FAQ button.If the problem is about Google Chrome?Try the following instructions:This is not a error page and the following information will be saved in the configuration file. 676, so that the system firmware could update the WLAN hardware driver..1. Technical Field The present invention relates to a configuration for a semiconductor integrated circuit, more specifically to a logic circuit and a gate array. 2. Background Art There has conventionally been known a Cram OXO technique for forming a logic circuit in an integrated circuit by stacking a plurality of Cram OXO blocks on a semiconductor substrate (see e.g., Japanese Patent Laid-Open Publication No. 2002-152233, paragraphs 0041 and 0053 and FIG. 3).Effects of a diuretic on the renogram in cases of renal dysplasia, persistent fetal circulation and occlusion of the inferior vena cava. The effect of the diuretic furosemide on the renogram was investigated in 13 patients with various congenital anomalies of the kidney. The patients had total ureteral obstruction in 11 cases, asymmetrical inferior vena cava obstruction in one case and bilateral dysplasia of the kidney in one case. In the 11 cases of ureteral obstruction, a complete picture of a renogram was obtained in all cases, and the contrast medium was clearly visualized in the kidneys, bladder and ureters without any obscuration. The half-time of the renogram obtained after furosemide administration was not significantly different from that obtained in normal subjects (P greater than 0.05). This result suggests that the renogram does not affect the blood supply to the kidneys. The size of the affected kidney decreased after diuretic administration in six of the 11 cases of ureteral obstruction. Changes in the size of the affected kidneys reflected the status of the blood supply to the kidneys. The half-time of the renogram and the appearance of the renogram in cases of total ureteral obstruction were comparable in the presence and absence of furosemide. The half-time of the renogram in asymmetrical inferior vena cava obstruction was similar to that of the renogram in normal subjects. In one case, the visualized image of the renogram was blocked by contrast medium in the bladder after furosemide administration, and the half-time
