training \*... more... Requirements: \* 2.3 GHz  
processor \* 1.6 GB RAM or more \* SVN Revision  
1889 or later \* Installation: \* Caution: Before  
install ProtoFit, please read the documentation at  
Changelog: v0.1.0 (2018-01-09): \*  
implementation of the model fit with new site  
energy matrix \* calculation of energy matrix  
(double) from titration data (labels) \* improved  
model composition (cleaning up) \* added reading  
of 3-D data \* removed import of XML file format \*  
minor changes in GUI \* b7e8fdf5c8

Evaluating models The program automatically fits the models to the data and assesses which model is best. Reading data ProtoFit reads, sorts, cleans and separates files and submits them to the pH-statistic software for evaluation. Read examples ProtoFit performance ProtoFit has been tested for over 25 years and is certified for Windows XP and Windows Vista, Mac OS X 10.3 and newer, and Linux Debian 6.0 and newer. ProtoFit has been used in more than 200 publications. Supported file formats ProtoFit supports many types of data. Compatibility All of ProtoFit's functionality is based on the Open Source-Project J-Express, a Java-based IDE with graphical editors and model visualization. Limitations In some cases, ProtoFit will work on models that are not completely built.

---

In this case, ProtoFit complains that model building is incomplete and nothing is displayed in ProtoFit-GUI and/or ProtoFit. References External links ProtoFit Homepage Category:Bioinformatics software Category:Mathematical and quantitative methods (chemistry)Q: ClickOnce application produces empty Main.Designer.cs I have developed a ClickOnce application in the past. I have had this problem before but as I recall I have been able to solve it. This time I am not. I click in Visual Studio 2008 click on build and it compiles the project but when I run it or publish it, it spits out a a blank.cs file. I have searched all over but don't know how to fix it. A: I had a similar problem recently, but instead of a blank.cs file, I was presented with a blank.Designer.cs file. I figured it out by renaming the file. Renaming.Designer.cs solved the problem. A: I had the same problem. I think you need to

---

rename the.Designer.cs file. I tried to rename by myself, but it didn't work, Visual Studio displays an error message. I renamed it in Notepad++, everything works. ### **What's New In ProtoFit?**

The ProtoFit software fits titration models from acid-base titration data with the help of Expected Leave One Out Leave Two Out error minimization methods. While ProtoFit is designed for fitting of titration models, the software can also be used for any problem in which a model description of a system is required, for example, kinetic models, enzyme models, chemo-physical modeling, binding kinetics and concentration profiles. The

---

software is applicable to any pH-titration and ionic strength series of measurements. The model contains the activity coefficients for all species at the four pH values that are used in the fitting. However, the activity coefficients may be entered only at one pH value. If there is no experimental pH value, it can be treated as a blind data point. There are several options to enter the data. As in an experimental study, the program is designed to use a single pH-titration curve, and pH-titration curves can be entered or model can be fitted to multiple pH titration curves. The ProtoFit software allows for maximum of 4 discrete surface species to be modeled. In the most frequent application of protons at the solute surface, the highest surface site is assigned to protonation. However, ProtoFit also allows for two other possibilities: the surface site can be assigned to the product of a first-order chemical reaction, and the site may be

---

assigned to a radical formed on the solute surface. For each discrete surface species, the software stores the bulk activity coefficient, the activity coefficient at all pH values, the protonation constant or the pK(a), the ionic strength at which the activity coefficients equaled 1. In the case where discrete surface species are modeled and activity coefficients are assumed to be equal to one, no activity coefficient is needed.

ProtoFit-GUI: ProtoFit-GUI is a graphical software interface with the main window providing user-friendly data visualization capabilities such as: 1) export data for model fitting and simulation; 2) import data for model fitting and simulation; 3) import experimental data; 4) model fitting with the help of Expected Leave One Out Leave Two Out error minimization methods; 5) graphical comparison of the model with experimental data. ProtoFit-GUI is designed to allow for easy

---

modeling of titration data without mathematical knowledge. ProtoFit-GUI is based on MATLAB®, ([www.mathworks.com](http://www.mathworks.com)) an environment with high level
