## AutoCAD Free Download X64

AutoCAD is designed to be used by architects, engineers, drafters, model builders, and students. It is used to create architectural and construction drawings, mechanical, electrical, plumbing (MEP) plans, and manufacturing blueprints. It can also be used to construct 3D solid models in SolidWorks and Creo for use in product design. With the 2017 release of AutoCAD 2019, the newest version of AutoCAD has also been made available for use on web platforms, making it a web-based software. Click on the name of any drawing component to see examples of the component. AutoCAD displays various types of 2D and 3D drawings, such as architectural, mechanical, electrical, and construction plans. Use of AutoCAD can be categorized into two major areas: drafting and design. Drafting is the creation of 2D drawings, whereas design is the creation of 3D models. In addition to drafting and design, there is also some overlap in tasks that are conducted within both drafting and design, such as creating section views, profile views, cross-sections, and 3D objects. For a more detailed look at drafting and design, refer to the AutoCAD Explained page. For a discussion of various types of 2D and 3D drawings, refer to the Drawing Types page. Before going through the basics of AutoCAD, a short description of CAD software is first provided. CAD (computer-aided design) software refers to software programs used for creating 2D and 3D drawings and models. These drawings are used by architects, engineers, drafters, model builders, and students. It is used to create architectural and construction drawings, mechanical, electrical, and plumbing (MEP) plans, and manufacturing blueprints. Some CAD software programs include additional features, such as making and editing mechanical drawings and manipulating 3D models in SolidWorks and Creo for use in product design. (By contrast, word processing software allows for word processing, including writing and editing documents, and spreadsheet software allows for spreadsheet calculations.) The difference between CAD and word processing is that, while the former can make 2D drawings, the latter can only allow for the creation of text. The difference between CAD and spreadsheet software is that, while the former can create 3D models, the latter can only allow for 2D calculations. CAD software is becoming more and more popular as the technology improves. CAD software is sometimes referred to as computer-aided design (
